ACMI: The Universal Memory Layer

What did the agent **actually** do?

The question every enterprise security review asks — and the one a multi-framework stack can't answer today.

Three frameworks. Three **audit gaps**.

- 01 Prompt safety
- Declared vs detected at the LLM boundary. Five action classes.
- 02 Execution audit
- Append-only timeline. Three keys per entity. correlationId end-to-end.
- 03 Cross-framework coord
- LangChain. CrewAI. Gemini. Same protocol, same trail.
